

Teamsters Union Local 631 Convention Craft Meeting Resolution

Turn Off Wi-Fi in Convention Halls!

This summer I wrote three books describing the hazards of electromagnetic radiation from wireless devices such as cell phones, cell towers, smart meters, Wi-Fi, and wireless computers, keyboards, mice, laptops, routers, and printers. The three books total 600 pages and are linked at padrak.com/vesperman. My website also links to 35 additional reports on dangerously unhealthy radio frequency electromagnetic fields.

One block east from the Freeman and GES labor trailers are two cell towers near a fire station. Freeman and GES employees may be exposed to dangerously strong cell tower radiation added to the radiation from their cell phones: At certain frequencies, wireless signals – far weaker than current safety standards – pull structurally important calcium ions off of our body's cell membranes, weakening and causing them to leak.

Having its meticulously balanced systems destabilized, even slightly, by wireless triggered leakage wrecks biological chaos – subverting the integrity of the body's intricate defense mechanisms and leaving it vulnerable to all manner of damage. Many symptoms of high sensitivity to powerful radio waves can thus be explained: Leaking skin cells cause rashes, tingling, numbness, burning sensations; leaking heart cells trigger potentially life-threatening heart complications; in the inner ear, leaking cochlear cells trigger tinnitus and leaking vestibular cells cause dizziness and other symptoms of motion sickness, including nausea. Electrohypersensitivity is similar to severe allergies to foods such as nuts.

The long list of biological malfunctions includes DNA damage, genetic changes, breakdown in intra-cell communication, protein damage, immunological function changes, reproductive system damage, decreased sperm counts, cell damage and death, brain-blood barrier leakage, brain nerve cell damage, free radical increases, melatonin decreases, possible linkage to auto-immune diseases like MS, embryonic cell damage, fetal defects, heritable birth defects, high blood pressure, diabetes, depression, insomnia, memory problems, autism, infertility, hormonal imbalances, brain disorders, protein and peptide damage, kidney damage, autisms, brain tumors, breast cancer, Alzheimer's disease, muscle aches, chronic fatigue syndrome, weakened bones, and literally hundreds of potential illnesses related to leakage in cell membranes throughout the body.

Sweden already has 270,000 people who are on disability for related impairments. Millions of people in Germany complain of all kinds of nervous disorders and of a new common illness, called "burnout syndrome". We are all already being injured by wireless radiation below the minimum level of symptoms. About 1% of Americans may already be suffering from electrohypersensitivity. The Russians were the first to call the condition 'microwave sickness' – reversible in the early stages, lethal over time.

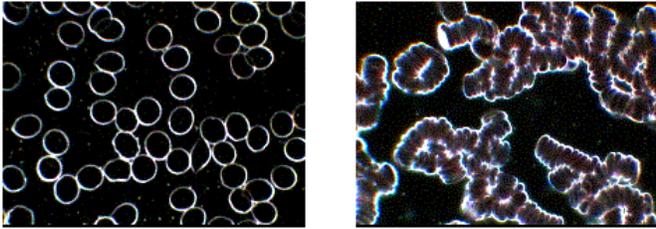

The bottom line is that all of us should minimize exposure to wireless radiation as much as possible. Children should especially not play with smart phones and be exposed to Wi-Fi in their schools.

All of the convention halls have Wi-Fi. We Teamsters have an opportunity to make some history. Our Teamsters Local 631 should pass a formal resolution to ask the Las Vegas convention halls to turn on their Wi-Fi only during conventions and only after ensuring none of our brothers and sisters are working on the premises and would be exposed to their hazardous Wi-Fi signals.

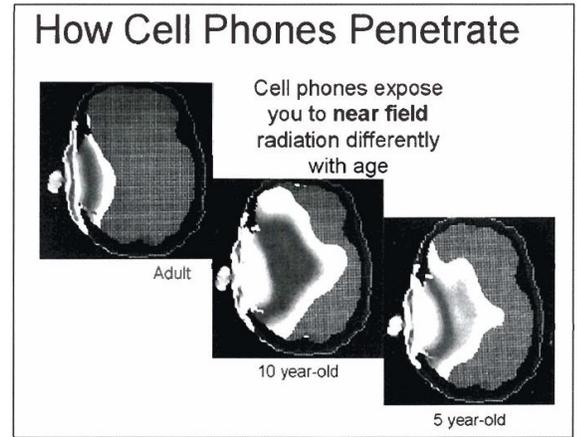

Gary Vesperman, Teamsters Local 631 Convention Journeyman, Boulder City, Nevada September 17, 2016

Images of Red Blood Cells, etc Affected by Electromagnetic Wireless Radiation

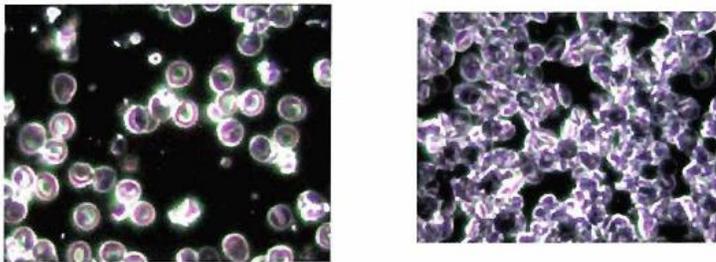

See pages 16, 17, 24, 25, 27, 28, 30, 32, 76, 77, 78 and 162. Examples:

Red Blood Cells Before and After a 90- Second Cell Phone Call

The amount of radiation penetration of a skull for an adult, a 10-year-old child, and a five-year-old child.

Disrupted red blood cell intercellular communication occurs within minutes of exposure to information carrying radio waves. Red blood cells must be able to sense the location of other blood cells to avoid clumping. Slide at left: prior to cell phone exposure – red cells are functional. Slide at right: after five minutes on a cell phone – red cells are clumped and non-functional.

Deformed cows near cell phone towers in Germany are just one example among many animal deformities appearing around the world. Research has also connected the worldwide disappearance of frogs, birds, and insects [most recently bees] with the dramatic increase of electrosmog permeating our planet.
